

## North East Camelot Series Windows – Product Features

### Camelot Series

NBP's Camelot Series offers specialty windows, including bay and bow configurations, garden windows, custom specialty shapes, and our premium sliding glass doors. CAMELOT window systems and sliding doors show a diversity of technologies and consistency of dedication to the same mission – the protection of your home and those you hold most dear, in timeless style.

### Camelot Series Highlights

#### 1. ENDLESS OPTIONS

With 24 specialty shape offerings and dozens of different grid options, you can find the perfect combination for your project.

#### 2. FLEXSCREEN

Our garden windows offer FlexScreen window screens - made of high performance spring steel frame that is captured in the screen track and can be easily removed from inside the home.

#### 3. 100% VINYL FRAMES

Fully welded, rigid PVC vinyl frames will not chip, rot, peel, or need to be painted.

#### 4. MULTIPOINT LOCK

Our sliding glass doors include a comfort handle with two lock positions with one turn of the key or thumb-turn.

#### 5. STEEL ROD & CABLE SUPPORT SYSTEM

A threaded steel rod and cable support system is offered for our bay and bow windows to support the system and maximize stability and strength throughout the life of the unit.

#### 6. DESIGN AND SERIES SPECIFIC FEATURES

Bay and bow windows can include double-hung, picture, or casement configurations and will include all the additional features of those window types.

#### 7. DP-50 RATING

Our sliding glass doors maintain a DP-50 rating, with impact certification available as an add-on.

#### 8. LOW-E GLASS

LOW-E glass is offered for many of our window configurations within this series.

#### 9. VARIETY OF COLORS

Camelot window systems have a wide range of colors with our exterior paint options.

## **Options**

### **Bay Window**

A Bay is an angular, multi-panel window, usually made up of a large center fixed unit and two flanking units, projecting out from the wall of the home. The three-window unit usually projects at 9, 15, 30, or 45-degree angles from the wall.

### **Bow Window**

The Bow is recognized by its smooth, graceful curve along a consistent radius. Each window is equal-sized, and the wider each window, the deeper the curve and projection from your wall line.

### **Garden Window**

Creating an immersed viewing area, the Garden window achieves what no other window style can by increasing the space inside your home. Bring the world one step closer to your home.

### **Sliding Glass Doors**

Our premium sliding glass door provides your home with a beautiful, durable, and energy-efficient entryway for years to come. The fully welded tempered insulated sliding glass door is available in two or three panels, with a right or left slide. The nominal sizes are 5', 6', 8', and 9'. A 12' version is available in four panels.
